## Dive Systems Service & Testing

**Pro-Diving Services** are well equipped to carry out service and repairs to diving equipment including the inspection and hydrostatic testing of cylinders.

Over the past 45 years PDS have been involved in providing quality service work to the dive industry.

This includes recreational, commercial, research, military, law enforcement and rescue organisations to mention a few.

Whether is be a dive regulator, BCD, full face mask, dry helmet or a specialised piece of equipment, the PDS Team will endeavor to give you their best service.

With work procedures in place combined with an ISO9001:2008 Quality Management, customers can be assured of not only quality work, but also of a full documentation trail for their equipment.

We maintain a traceable history of your serviced equipment.

PDS are also a fully approved Gas Cylinder Test Station. This certification date goes back as far as 1979. Cylinder testing, internal cleaning and valve servicing are part of the service we provide. Support spares are on hand for most valves.

We can also provide external blasting and powder coating of some cylinders.

The PDS Facility is well equipped with a combined test station, light machining capability and service support rooms as well as a Laminar flow bench for specialised service requirements.

Our Main service room is set up with large scale pressure gauges, flow meters and other support instruments to help ensure divers get the type of service they expect with equipment their lives depend upon.

Our service department, test station and support facility undergoes external audits annually to ensure that we are doing work correctly and providing service to the needs of the industry.

An important part of our responsibility is encompassed in regularly sending our questionnaires to customers asking them to give input and or any concerns about the services we provide so that we can take this on board and strive towards continual improvement.

Safety and quality always being at the front line as well as providing an efficient service.
